

RUBA Thermoplast AG

your top cap supplier &
professional toolmaker

RUBA-caps with real wooden over cap

As an extension of our range, we offer a very special combination of a RUBA closure and a real wooden overcap..

The execution consists of an existing ribbed RUBA Classic Standard screw cap and a wooden part.

The cap is produced by us and then it will be completed – glued together with wood, which is made by one of our selected partner.

For the tubes Ø35mm we have successfully introduced the 30mm RUBA closure with thread M15 and a wooden overcap Ø35mm into series production. Other diameters of the new wooden caps are also possible.

Our caps can be colored in almost any color. This variation option also applies to the wooden overcap. All used masterbatches are eco-friendly.

An individual structure of the surface makes this high-quality cap **unique!**
