

RUBA Thermoplast AG

**your top cap supplier
&
professional toolmaker**

MyCap by RUBA®

Almost all tools, which are developed and manufactured in our house, are constructed in order that the injection point is situated inside of the caps.

Because of that, the production of an individual outer shape and the combination with already existing inner shapes is possible.

The inside of the closure remains unchanged, so there is no new validation of the product necessary.

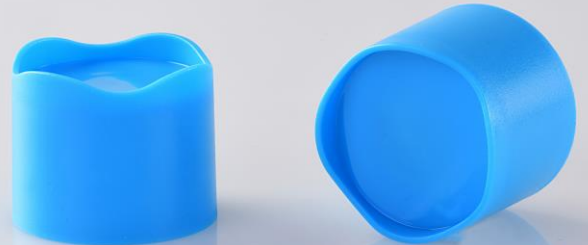

This is called «**MyCap by RUBA®**».

With minimal costs, the modular system of tools offers a wide range of solutions for your and your customer-specific wishes and ideas for all caps in all diameters.
